

Important notes:

You won't be able to reposition your decal after the backing paper is removed, so plan carefully where you are going to put your vinyl art. Decals are not reusable so please take care when positioning. They can be easily removed but may become damaged in the process. Before you begin it is important to unroll decal and lay on flat surface with application tape facing down and backing paper facing up.

With application tool (or credit card) rub down on the backing paper. This insures decal is gripped by the application tape. Remove dust and debris from the surface with a damp cloth & allow to dry. Apply the included free test decal to your space or similar surface to ensure proper adhesion before applying your purchased decal.

To remove heat with hair dryer on hot setting for 5 minute and slowly peel decal from the corner at a 45 degree angle.

Gather the tools you'll need: scissors, measuring tape, application tool (squeegee or plastic card), masking tape or vinyl strips provided.

Step 1 Prepare the area

You need a clean, dry surface for your decal to stick. So clean the area with alcohol or soap&water. If you apply decal on to the wall - wipe with a damp cloth & allow to dry. If you have recently painted you need to wait two weeks before applying your decal.

Step 2 Position your decal

Before you apply your decal you need to position the graphic on the wall using masking tape or vinyl strips provided on four corners ensuring it is level and you are happy with the position.

Step 3 The Hinge

Once you are happy with the position place a strip of masking tape across the centre of the decal to create a centre hinge, or use provided vinyl strips.

Step 4 The Peel

Fold one side of the decal back. Peel away the backing paper, if any letters remain stuck to backing paper, rub back down on the backing paper with your finger and try again. Then cut away the exposed backing paper.

Step 5 The sticking

Starting from the center, press transfer paper with decal to the surface and apply medium pressure with the squeegee or plastic card. Work slowly from the middle out to the edge, keeping tension on the corners.

Step 6 Remove Hinge

Remove the masking tape hinge or vinyl stripes and peel away the remaining backing paper. Keeping tension on the corners press the graphic onto the surface repeating step 5.

Step 7 Remove application tape

Wait 10-15 min. and carefully peel off the application paper. The wall sticker should remain stuck to the wall. Try and peel the transfer foil away in a direction as close to parallel to the wall as possible. If sections of the graphic stick to the application paper you can push it back to the wall rub with finger and try again.

Step 8 The big reveal

When the tape is removed your decal is finished. Press any small, delicate parts down gently with your finger.

Congratulations!
Stand back and admire your work!
